## Fund Adviser's Report

At each Quarter End we shall look to take a step back from shorter term trends and returns, and will address the broader macro themes driving income investing. The quarter was one of the most extraordinary in terms of events that even those of us who were trading and investing when Mrs Thatcher won a second election propelled by the "Falklands factor" have seen.

We are pleased to report that notwithstanding the momentous events and the concomitant gyrations in most asset classes, the Fund (C Accumulation Class) ended the Quarter up 0.27%. We mentioned above that most asset classes gyrated – but global government Bonds did not; rather they continued their relentless rally with 10 year gilt yields reaching 0.85% at the month end.

Three themes are uppermost in our minds as we invest the Fund presently, and those are: (a) low interest rates; (b) liquidity; and (c) the changed UK balanced budget target. The policy maker reaction to Brexit has been: (i) for Central Banks globally to pump in liquidity – with market participants pushing expectations of official rate rises many years into the future, with even the Fed almost certain to hold rates in 2016 and only possibly raise in 2017; and (ii) in the case of the UK, for the Conservative administration (albeit via its disparate parts) to make it clear that the target of balancing the budget will be pushed out from 2020 to many years beyond.

We recall a time when the wisdom was that Equity and Bond prices moved in different directions – not so in 2016's liquidity driven environment; a combination of "where else do we put the inflows?" and "window dressing" for the quarter end as Equity market participants rushed to increase allocations as the market rallied (so as not to be under allocated and underperforming their benchmark) drove Equity indices strongly upwards alongside Bond prices in a way that few would have foreseen post the British referendum result.

We see these developments as highly supportive of our strategy and of infrastructure investing broadly. Firstly, the loosening of UK fiscal policy referred to above will strongly support Public Sector spending which will assume far greater importance in the economy for the foreseeable future. With inward investment, corporate investment and consumer spending all likely to fall to some degree, it will fall to the government to take up the slack in the economy by spending on infrastructure projects; we consider this was highly likely before the vote and now to be a clear certainty.

Secondly, alternatives for Income investors continue to rally as noted above, with yields on Bonds and Equities falling; we see little prospect of that trend reversing, given global Central Bank interest rate policies and QE programmes. These persistent factors will, we believe, continue strongly to support infrastructure investing given its combination of a higher yield than Equities or investment grade Bonds and its implicit low volatility – cash flows based on water, gas and electricity flows and on schools and hospitals, being the disaggregated flows which underlie the Fund, continue to arise with metronomic predictability.
